9. Category:Computer-aided design softwareQ: How to use sql query in c# with null and empty string I am beginner of programming in c#. I'm using sql query My sql query Select * from [dbo].[DonorList] where email="+ddlemail.SelectedItem.Value+" and contact="+ddlcontact.SelectedItem.Value+" and telephone="+ddltelephone.SelectedItem.Value+" and the reason="+ddlreason.SelectedItem.Value+" and userid="+ddluserid.SelectedItem.Value+" I don't know why if user is not select from userid then the result is nothing. In fact, sql statement show error Input string was not in a correct format. Is there any option to use sql query in c#? I have tried this code if (ddlemail.SelectedItem.Text == string.Empty) { cmd.Parameters.Add("@email", SqlDbType.VarChar, 100).Value = string.Empty; }
