If you are facing issues while installing an external device (like a DVD/CD-writer), first check if the device is compatible with your system. If it is compatible then go ahead and install the device. If you are unable to install the device, then it means you need to download the drivers manually for your external device. So here is the steps for manual driver installation process. Search your device name using the keyword (DRX-830U) in the search bar. Search Results. You will see a number of results. Most of the results are the drivers of other devices like printers, monitors etc. If you don't find the driver of your device then click on the View All option given at the end of the results page. This will open a new window. Now click on Device Manager option given on the left side of the window. You will see the list of devices. Scroll down the list till you find your device. Right click on your device and select Update Driver.
