The job takes about 15 seconds to run. I cannot run the job as a stand-alone job (I'd have to log into the server first) so I use the job to run other jobs. The "owner" of the job is set to an account in another server, and then I have a job set to run on the 15th minute to finish off the job. It is very important that the last job run is not rescheduled, as it runs every night at the same time and it has to be finished first. The last job runs every night at 10 PM. My question is: is there a way to substitute the last job for the 15th minute job in the job queue, as I would not want the last job to be rescheduled on a different 15th minute? I'm aware that I can remove the 15th minute job from the queue, run the job on the 15th minute, then re-queue the job. But that would seem like a bad thing to do for an 8 hour period. A: You can't configure this
