

Star Stable Download Old Version [Latest] 2022

active 1 1 2 1 0 3 1 0 Can anyone please help me with this? A: In SQL Server 2017 you can use SqlFunctions.DatePart, in earlier versions you can use CONVERT() Here is the SQL for SQL Server 2017 SELECT t.[id], t.prdr_type, t.[count_dt], [count_dt] = DATEPART(YEAR, t.[count_dt]) * 100 + DATEPART(MONTH, t.[count_dt]) * 10 + DATEPART(DAY, t.[count_dt]), [month] = DATEPART(MONTH, t.[count_dt]) FROM [dbo].[tbl1] t
For earlier versions of SQL Server SELECT t.[id], t.prdr_type, t.[count_dt], [count_dt] = CONVERT(INT, DATEPART(YEAR, t.[count_dt]) * 100 + DATEPART(MONTH, t.[count_dt]) * 10 + DATEPART(DAY, t.[count_dt])), [month] = DATEPART(MONTH, t.[count_dt]) FROM [dbo].[tbl1] t Q: Получение списка вложенных элементов List Здравствуйге. Подскажите, пожазу
