alumni Category:Brazilian expatriates in the United StatesDescription: A plot to assassinate President-elect Trump has been  
uncovered by the FBI. Undercover agents have infiltrated a terrorist organization and they have the evidence. They are just  
waiting for orders from "the boss". A senior FBI agent has been hired to carry out the assassination. In order to do this, he will  
have to impersonate the President-elect. He will have to avoid suspicion, lest the FBI has to go on a full-scale investigation to  
discover who the real President-elect is. The movie follows how the agent works his way into the top echelons of Trump's inner  
circle. This movie is currently the 2nd highest-rated movie on Rotten Tomatoes and the highest-rated British movie on IMDb.Q:  
Distinct column in mysql and count the number of records based on other columns I have a table with: id name code What I  
want to do is to select the name, count the number of codes and show it with the name. My attempt: select count(distinct name),  
name from my\_table; This is not working. It seems to me that I don't have the right syntax. Please advise A: Try this: SELECT  
COUNT(DISTINCT name), name FROM your\_table It also seems like you are expecting name to be in the SELECT clause,  
instead of being in the GROUP BY clause. Pages Saturday, February 21, 2009 Sawyer of Wollongong - Windy Bridge Stops We  
got the call from Sawyer saying they were on the move. Trav was at a family function last night, so we'd promised to keep him  
posted on the situation. He came through a couple of hours later with the 2d92ce491b
