So I want to be able to store the values of each url in the database. I want to know how to pass the values to the controller. E.g. controller: class example extends CI_Controller { public function user(\$id, \$username, \$password) { //do something with id, username and password } } Routing: \$route['user/{any}/{any}'] = "example/user/\$1/\$2"; When I access it is not passing the values to the controller. I tried passing the values like: \$url = array(123,'mkyt35.com'); \$route['user/{any}/{any}'] = "example/user/\$1/\$2"; \$route['c
