An important advance in the treatment of cancer is chemotherapeutic treatment, wherein chemotherapeutic drugs are administered systemically or to an isolated tumor or metastasis, often in combination with radiotherapy or surgery. While chemotherapeutic drugs may have some beneficial effects on the tumor itself, these drugs also cause systemic toxicity and often result in the death of the patient. This is true of both primary and metastatic tumors. In fact, the elimination of systemic toxicity by the development of drugs that are effective against metastasized cancer would permit the application of more intense therapy in order to result in the cure of the patient. In the chemotherapeutic treatment of cancer, it is often necessary to have a substantial or gross reduction in the size of a tumor prior to surgery or therapy, and the ability to effect this size reduction is of primary importance. This reduction may be referred to as debulking the tumor. The reduction is usually effected by a combination of chemotherapy and radiotherapy. The reduction may be beneficial in other ways as well, such as making the tumor amenable to removal by surgery, or minimizing the risk of metastasis. The reduction may also affect adversely other system functions in a patient, such as by causing anemia and leukopenia. Until recently, the preferred cytotoxic drug for chemotherapeutic treatment of solid tumors was 5-fluorouracil (FUra), particularly in combination with other drugs. A problem with the use of FUra is the toxicity associated with the agent and the effect of the drug on the individual treated.

You can buy a cracked copy of Metro 2033, or you can make your own. You can use a game-cracker to get a key, or you can use a booter. Metroid: Other M was the first game to have a booter created for a specific game. And of course, the booter would be for Metro: Other M. And the booter is just a program that will tell a game you own to boot a disc without you having to insert it. This is the site that has the booter for Metro: Other M. I will upload it here so you can see exactly what the booter does. If you want to see how it works, check it out here. The developer, msaditz, has also made a booter for Dead Space 2, that works the same way. Check it out here. I have found many booters for Metro 2033, but most are for Metro 2033 Redux. The booter on Xelmac's website is for the original Metro 2033. If you want to know more about booters or game-crackers, there is a large thread on the r/Metro2033 forums.
