Here's the code I'm using to add the marker: function initialize() { var map = new google.maps.Map(document.getElementById("map"), { zoom: 4, center: new google.maps.LatLng(-36.726772, -55.455533), mapTypeId: google.maps.MapTypeId.ROADMAP, mapTypeControl: false, mapTypeControlOptions: { style: google.maps.MapTypeControlStyle.DROPDOWN_MENU, position: google.maps.ControlPosition.TOP_LEFT }, navigationControl: true, scrollwheel: true, streetViewControl: true }); var geocoder = new google.maps.Geocoder(); geocoder.geocode(['address': 'Barry's, North Strand, North Shore', 'region':

Click the Download button below to complete the download. . 5 Nov - 1 min - Uploaded by ItooRailClonePro 3.3.1 Crack + Full Screen Fix Q: How to set up maven environment variables for my pom.xml file I have a webapp that is build with pom.xml file. It was created a long time ago. The environment variables are not set up and not sure if they are set. How can I check what are the variables I need to set? I want to set the variables so the production build can be done easier. I only want to set up the environment variables. The environment variables to set are: \${OPENSIFT_PROJECT}=\${OPENSIFT_APP_NAME} \${OPENSIFT_APP_DNS_HOST} \${OPENSIFT_APP_DOMAIN} A: You can use the mvn org.apache.maven.cli.Maven-run-mojo to setup the environment variables and then check them like so: \$ export OPENSIFT_PROJECT=myproject \$ export OPENSIFT_APP_NAME=myapp \$ mvn clean install The result should be in your logs. EDIT In some cases you have to use the \${...} syntax for the environment variables in the pom.xml file and also specify a value like this: \$ export OPENSIFT_PROJECT=myproject \$ export OPENSIFT_APP_NAME=myapp \$ mvn clean install The result should be in your logs. Effect of pH on flagellar motors of green alga Chlamydomonas reinhardtii We have investigated the effect of pH on the activity of the flagellar motors of green alga Chlamydomonas reinhardtii. The minimum pH for swimming was 5.5 +/- 0.1. At pH > 6.5, the flagellar motors of living cells were more resistant to low pH than to higher pH. The motors could not function when the external pH was below 4.5. ATPase activity of axonemes 2d92ce491b
