The remarkable mechanics of the venus fly trap: from the physics to the biology. Many characteristics of the Venus Fly Trap (*Mimosa pudica*) are the result of an unusual mechanical design. The mechanisms of catch and release, together with the use of latex in the trap, which has not yet been demonstrated to be an effective trap as a long-term protein reserve, is the foundation of the remarkable physiology of the Venus Fly Trap. Key features of this system include: (1) the highly permeable leaf, (2) the trap mechanism, and (3) the slow kinetics of protein turnover.
from the disappointing dept ... and a few other links... We've been quite impressed with how well the promotion of 'openness' has played out in the last year, at least when it comes to records. Now we're finding that we've become even more of a force for openness, at least in the area of music. A very useful service for me personally, is the ability to subscribe to NPR music on my iPhone, and use their app to listen to my music. That's a lot of music, and it's just as nice to listen to when the weather is nice. Anyway, they had their annual concert last weekend, and it was a great show that was particularly well-received, especially among the huge crowds. The reason it was particularly well-received, is that the tickets were all sold out a long time in advance, which was unheard of. The NPR News department blog quoted some fans as saying "the experience was like going to a rock concert. There were definitely no crowds, and most of the people were quite unfazed by the goings-on around them." I think the organisers were actually quite surprised by the response, so they were able to plan for a much bigger show than expected. That's great, and a huge vote of confidence for NPR and their music, but it also makes me wonder if the music industry is a little blind to the potential of crowdsourcing and open music. NPR did this last year, and it really worked well for them, and perhaps it can work for other groups. The people who

There are hundreds of Windows 7 themes available in the Market. This article presents 101 window themes of my own collection. Over the years, i. All themes are fully resizable and can be scaled to any resolution.
Q: Using VB.net to assign object, add object to collection, and then check collection to find if object is unique
I'm working in VB.net and currently working on a project where I have to find unique messages in a list. These messages will be posted from the user (the messages are the form values), so they might post the same message multiple times. I've written the code below to find the number of messages, but I need help writing the code that checks the collection for duplicates. This is what I have so far.
Dim message As String = Form1.PostMessage(tbProfile.Text)
Dim uniqueMessageCount As Integer = messages.Count - 1
Dim uniqueMessageMessage As String = messages(uniqueMessageCount)
A: I'm assuming that you use a generic collection (List or Dictionary). If so, you can use the function DistinctBy:
Dim result = messages.DistinctBy(Function(m) m)
The subject matter disclosed herein relates to generators for rotating electrical machines. More specifically, the present disclosure relates to fan cooled systems for exhaust systems of electrical machines. Electrical machines include a fan to draw air through an inlet to pass over a rotor to cool the stator and rotor. During operation of the electrical machine, the temperature of the rotor and stator may increase, thus requiring further cooling of the electrical machine. This cooling requires additional power and/or significant manufacturing tolerances. Thus, there remains an opportunity to develop electrical machines that provide more efficient cooling systems.
Bendires Bendires is a Brazilian band created in 2004. Their first album was Bendires, released in 2005. Its lyrics are written by Christian Antonio de Paiva and its production was done by Nuno Marques. The band has signed with the record label ZNN Records, founded by the Brazilian musician and composer Paulo Miklos, who also produced the album. The first single from the album was "No-No-No", which achieved great success.
Current line-up Bendires Christian de Paiva - vocals André Machado - guitars Luan Rodrigues - keyboards, programming, vocals J.C
