Category:Lists of software Q: Find if an image is changed in Android app (without a Fragment) I'm coding an app that will make a list of app-calls on a fragment. One of the features I want is to make sure the user has just logged in, and that the list is sorted by the recently-used app-calls. My problem is that when the user logs out, the app opens a dialog to clear the cached data, and the onCreate() of the fragment will not be called again. My question is: How can I find out if the image has changed, without a fragment. A: My suggestion is to use SharedPreferences, and store the list of items inside that. Then, when a user logs in, you can compare the current list of items with the one they have in their prefs. Then, if the list isn't the 2d92ce491b
