After downloading the AppImage, use the command: `appimage -i Path/to/AppImage/File.AppImage -o Path/to/output/file.extension` Where: appimage is a software that creates AppImage files. is a software that creates AppImage files. These are important to note especially if you are using Windows. For this tutorial, the maximum dimensions of the document are 6000 x 4000 pixels. Resize the document with the crop tool. This removes the outer edges of the image, making the image more square or rectangular. The edges get wrapped around the dimensions. For small images, the negative numbers does not matter much. Q: Modifying the structure of existing documents in CouchDB - Is it possible? CouchDB's primary model is that of storing documents as JSON, rather than as files. As a result, CouchDB can make changes to the existing document structures without rewriting the whole database, which is a huge time saver. However, I have noticed that it is not possible to make modifications to a document's fields on read (when a user view a document). For example, if one wanted to rename a user, you would need to add a new user with a new id, and re-save all the users. Now I am wondering what if I had a document structured like so: { "_id": "mike", "name": "Mike", "department": "test", "phone": "555-5555", "email": "test@test.com" } Is it possible to modify the existing document? A: Changing document properties is possible using an update function: `function(doc, req) { doc.name = "John Smith" doc.save(function(err) { ... }); }` Immunological properties of polysaccharides from *Rhizomucor miehei*: structural elucidation by chemical degradations and immunological in vitro bioassays. *Rhizomucor miehei* is a fungal species with known potential to produce a group of polysaccharides used in biomedical applications. In this study, the chemical and immunological properties of *R. miehei* native polysaccharides (RMP) were characterized. Chemical analysis confirmed the presence of D-glucose, L-rhamnose, D-galactose, D-mannose, and L-arabinose in these polysaccharides. The structural investigation of RMP was conducted using two sets of monoclonal antibodies. The first, using a monoclonal antibody produced against the dextran-like polysaccharides from *R. miehei*, identified polymers larger than 50 kDa as the most immunogenic components. The second antibody was produced against the dextran-like polysaccharides from a different strain of Rh

Mom One to Potty-Train Baby-Star A first-time mom who was ready to potty-train her new baby girl, only to be thwarted by a mysterious medical condition. “My husband and I were preparing for a vaginal birth, but I was diagnosed with a pretty rare condition called PUPPS (preterm urinary protein plug syndrome), where I would pass a thick protein clot that would block the opening of the bladder that contained the urine,” wrote Eleni in a Facebook post. “After a bunch of doctor appointments, ultrasounds and two separate surgeries, we decided to have the baby vaginally,” she wrote, adding that she was “relieved.” “I thought that baby went pee pee potty on my due date. Turns out it wasn’t pee pee potty, it was more of an uber-stinky type of potty.” The ailment has only given her one more baby in her family. The girl is her second, and she was still expecting a brother after her first was stillborn. “One year ago, I lost my baby boy via miscarriage,” she wrote. “The doctors said he was only 2 weeks in development.” After her experiences with her first baby, she said she was looking forward to having sex again. “My husband and I had just bought our first house and it was around the time we were due for a ‘re-do’ at our place,” she wrote. “We were pregnant with a boy, and my husband & I were eagerly anticipating the sex, but sadly, our son didn’t cooperate with us that weekend.” Thankfully, she was able to carry her baby girl to term, and in July she was able to breastfeed her on her own terms. However, the mom’s prenatal habits were not up to par. “I was eating a lot of food and drinking lots of alcohol. Due to the health risks of these pregnancy experiences, we decided to have a C-section delivery,” she wrote. “I did not eat any junk food, and I did not drink alcohol for the remainder of the pregnancy.” This girl will be smart to potty-train at a young age. She’ll be able to travel with a diaper bag,
