JTreeview Crack+ For PC

JTreeview is a Java based open source tree viewer based on the original YTreeview and some modifications to the layout of the tree. JTreeview Features: - Support for multiple Newick format files (memory- or disk-based) - Ability to load a Newick file from the disk or as a stream from the web - GZIP compression support for the Newick binary format (not for the file format) - Tree root can be highlighted with regular expression searching - Display of different layouts (fixed node size and child nodes layout) - Show the branch name and level of the selected branch - Automatic resizing of the tree with no jittering or distortion. Tree root is not affected. - Easily navigate tree through the keyboard (with Numpad + and - keys). - Tree can be displayed as a list or as a full sized tree. - Node and leaf node names can be highlighted with regular expression searches. - Ability to show all the nodes and leaves in a branch in a single scroll pane. - Ability to select tree nodes and branch with regular expression searching. - Show all the sequences in the selected tree nodes using regular expression searching. - Load Tree from any Java file (files or bytecode). - Can be started on any Java or .NET/COM+ application. - ActiveX version also available in .NET. Java Package for download. Currently available for .NET, COM+ and Java.
