I tried to implement it as defined in shared\_ptr, but it doesn't seem to work. Please correct me if I'm wrong, but from what I see the C++03 shared\_ptr implementation doesn't allow an object to be destroyed directly (as opposed to C++11's shared\_from\_this). As a result the class I'm trying to use it on is a temporary object that will be destroyed before the function returns. class A { int a; std::shared\_ptr ptr; }; class D : public A { static A& this\_object() { return \*(static\_cast<shared\_from\_this>()); } void print\_fields() { std::cout << 3e33713323
