According to Wikipedia, a collage is a work of art that combines a variety of components. In collage, only half of the work is typically visible on the surface. A well-made collage usually emphasizes, rather than obscures, the components of the work. The best collages will contain a clear purpose, but despite this, they will be both abstract and coherent enough to be interesting. There are two basic techniques used to construct collages. The first is to work around materials—tissue paper, sticky tack, glue, Velcro, fabrics, or other materials—and the second is to work around ideas. In the first type of collage, the work has a single purpose, so the components are simply arranged to accentuate that idea. In the second type of collage, the work may have several purposes, but all the components are of the same kind.
