To use Photoshop with the more traditional image editing method of layer-based editing, try Elements. It can be used alone or in conjunction with Photoshop. Photoshop Elements 6 is a full-featured editing program with its own layer-based editing tools, but it also lets you create and edit

raster images. The latest version, Photoshop Elements 6.0, allows you to work with more complicated image types, including JPEG2000. For beginners, you can find a lot of helpful tutorials for Photoshop Elements online or in magazines or on DVDs. Tutorials and Tools To get started, check out a number of online tutorials for Photoshop and

Photoshop Elements. Here are a few that are available free at www.adobe.com: • Photoshop Basics (a set of videos with an introductory article by Eliot Eizenschitz) • PSD Basics (a set of videos with another introductory article by Eliot Eizenschitz) • Photoshop Elements Basics (an introductory set of videos by Grazia Osso) • The Complete

Figure 9-2 shows the Text tools in action. **Figure 9-2:** Text tools in Photoshop Elements and in Photoshop. In Elements, you can use text tools to create, resize, and move text, add and edit line art, and, of course, change the color of text and its background. You can even

add special effects to text such as using antialiasing and filters to make text more interesting. (You can read more about text tools in Figure 9-2.) In Photoshop, you have the same set of text tools that are available in

Even though it is often included in the same software bundle as other

Adobe apps, Photoshop Elements is an entirely separate app. It is generally not used in place of another Photoshop app and so is less commonly used by photographers.

Q: Identify the object when a property of this object is needed I am using jquery for the image gallery. The code I currently have is and the javascript is

```
$('.image').click(function(){ var clicked_img = $(this); var src = clicked_img.attr('src'); var id =
```

`clicked_img.attr('id'); // do something`
`});` So I have 3 images clicked and on clicking I need to know the id of the image as well as the src of the image. My question is can I pull these properties using something else than the `'.click'` function. I thought about storing the data in a array and using the property of the array to determine the related property but I am not sure

how to achieve that. Any help will be appreciated. A: You can get the id of the clicked element using the this keyword as, `var image_id = $(this).attr('id');` Alternatively, you can define a new method in your jQuery object that retrieves the id `jQuery.fn.getId = function(){ return this.attr("id"); };` Now you can use this method as, `var image_id =`

`$('.image').getId();` Q: Media framework issue I am using the media framework in my App for playing audio files using `AVAudioPlayer`. Its working fine, but the only issue I have is that whenever its playing, the status bar goes black and the screen goes white. What could be the problem? I have gone through almost all the solutions and it

doesn't help. Any help is highly appreciated! A: I had same problem and I found out solution. The only issue is I was playing the audio file in background. so once I stopped the audio player its status bar was changing. Hope this helps. A: I solved it by doing
