□ SYS Mail Pro OST to PST Converter is an all-in-one solution to convert OST to PST with a simple and user-friendly interface. Various non-invasive methods are known in the art for measuring or detecting biomarkers or risk factors indicative of various pathologic conditions or potential disease states. Most of the prior art non-invasive methods have been focused on the quantitative or qualitative analysis of blood or other bodily fluids. Such prior art methods are limited because they are invasive and require ex-sanguination of the patient and subsequent analysis. The prior art has also suggested methods for non-invasively determining blood alcohol concentration by analyzing urine. In principle, various exogenous analytes may be non-invasively determined by analyzing their metabolic products or metabolites that are systemically distributed in the body. For example, biomarkers can be determined by measuring their metabolites in blood or body fluids. However, metabolizing enzymes do not completely convert exogenous analytes to their metabolites. In addition, blood and other bodily fluids are very complex mixtures of analytes, metabolites and contaminants, all of which may interfere with the determination of a particular analyte. One method of analyzing blood or other body fluids for biomarkers is mass spectrometry. Mass spectrometry is a technique for identifying and analyzing a specific chemical. Mass spectrometry has a very high sensitivity and specificity. However, mass spectrometry is a highly complex technique that has proven difficult to implement and difficult to automate. Mass spectrometry has been highly successful in pharmaceutical and biomedical research, but its applications in clinical chemistry have been limited. In view of the limited applicability of the prior art methods for non-invasive detection of various analytes, there is a need for a method and apparatus for non-invasively detecting analytes of interest in the body.

My current solution works, but it seems to take an insanely long time for numbers that are really large. Anyone know of a cleaner and/or faster solution?
